

The WMO Global Atmosphere Watch (GAW) programme

Sara Basart (sbasart@wmo.int)

Scientific Officer

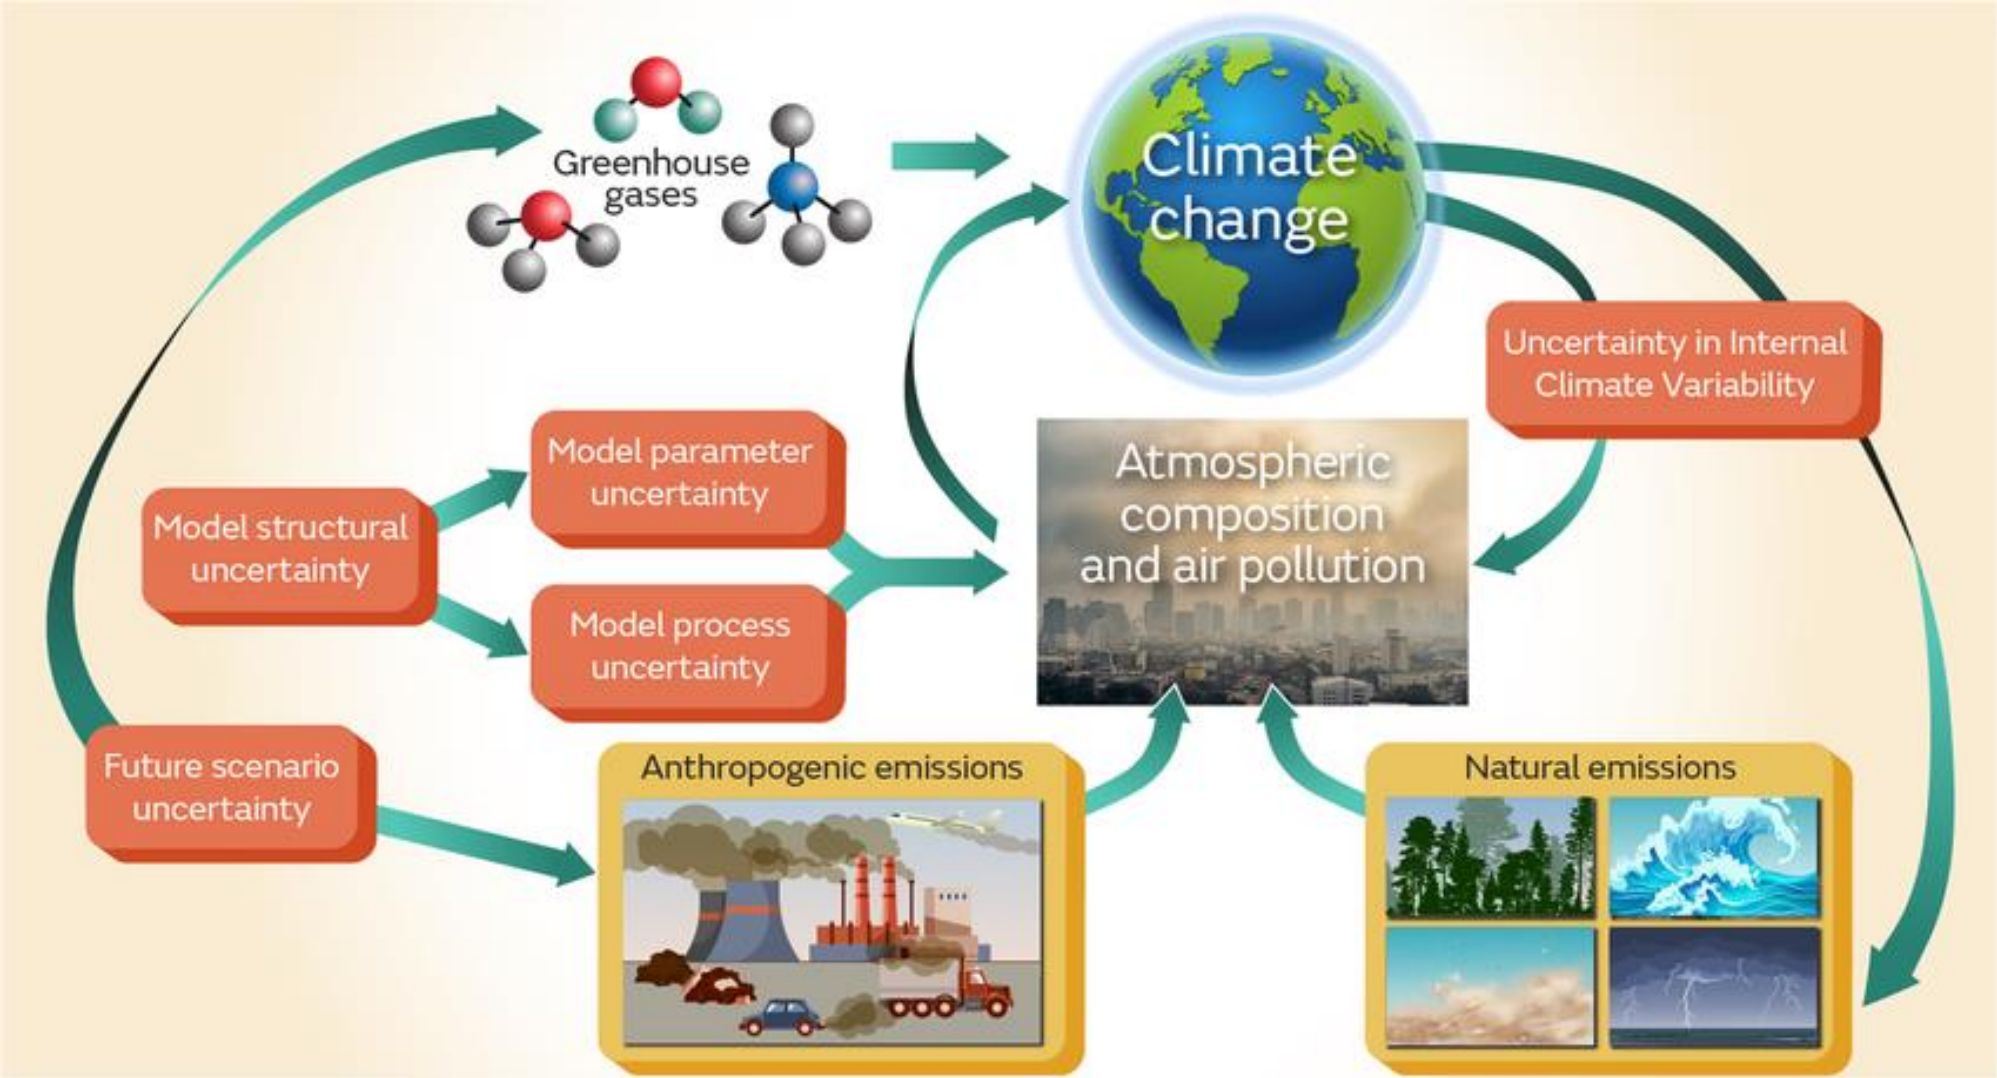

WMO Science and Innovation Department

WORLD
METEOROLOGICAL
ORGANIZATION

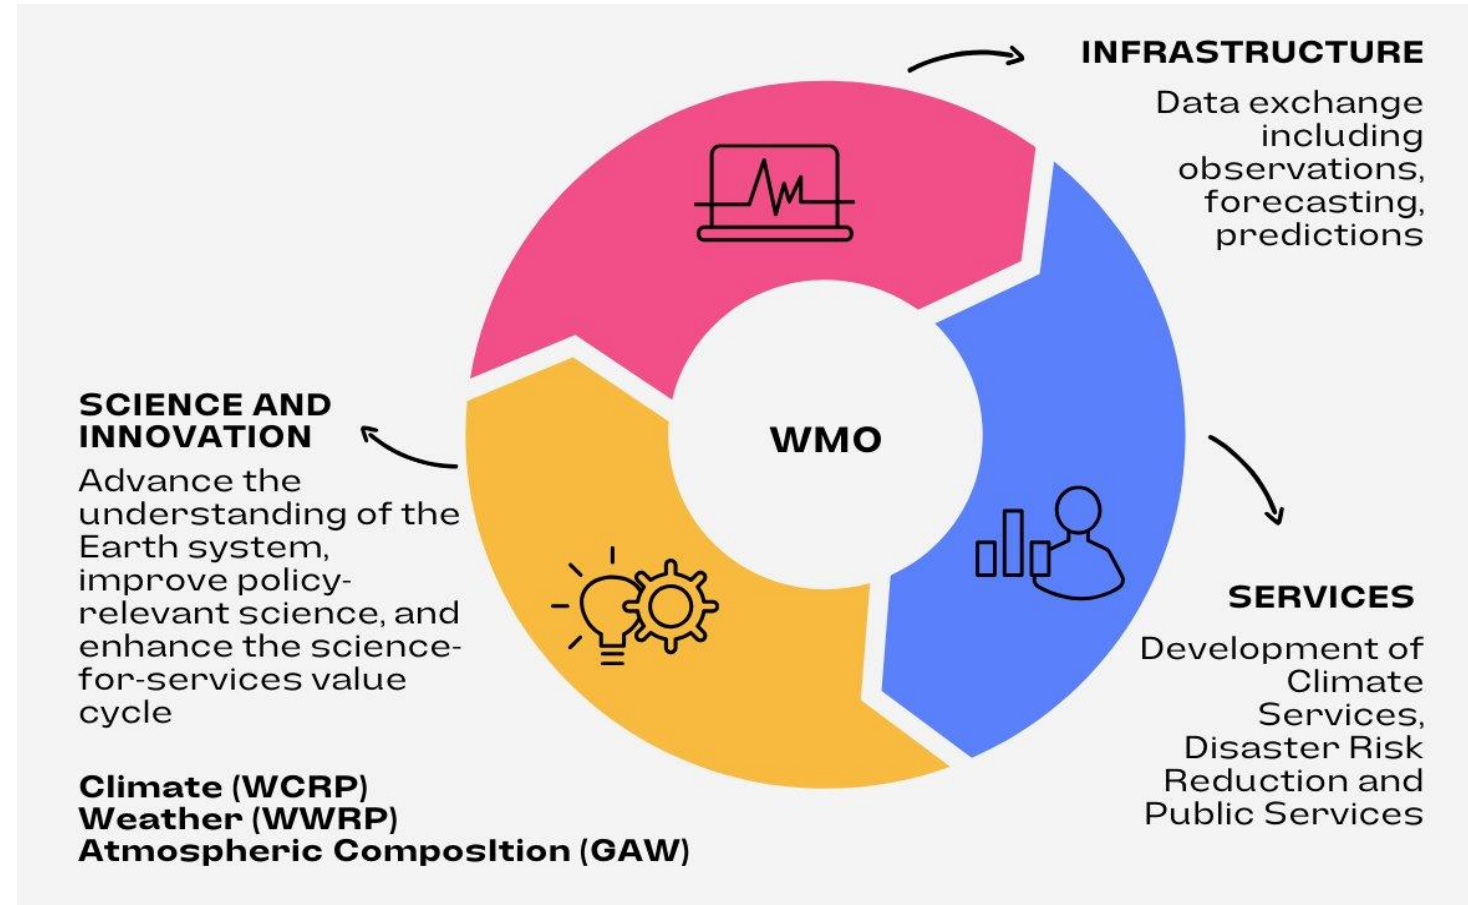

Scientific Scope | Atmospheric Composition

Which source of uncertainty is more important for projections of **future atmospheric composition and air quality**?

World Meteorological Organization (WMO)

- UN specialized agency on weather, climate and water.
- It's supported by 193 Members and the headquarters is in Geneva (Switzerland).
- Coordinates work of > 300,000 national experts from meteorological and hydrological services, academia and private sector.
- Co-Founder and host agency of IPCC.

WMO Research-Operations Departments

WMO Research - Global Atmosphere Watch (GAW)

Research Enabling Atmospheric Composition Services

*Advance and enhance **science, infrastructure and services** related to atmospheric composition, and support policies for society through applied research aimed at improving the understanding of the roles of **aerosols, reactive gases, stratospheric ozone, greenhouse gases and deposition** and their interactions in the Earth System.*

Drivers: Global societal needs

Support to international conventions and SDGs

- The Convention on Long-range transboundary Air pollution (LRTAP)
- The Montreal Protocol and Vienna Convention (*ozone*)
- The UN Framework Convention on Climate Change (UNFCCC)
- Climate and Clean Air Coalition (CCAC)
- The Convention on Biodiversity
- The Group of Experts on the Scientific Aspects of Marine Environmental Protection (GESAMP)
- UN Coalition for Combating Sand and Dust Storms

The GAW Programme: 4 pillars

Monitoring Infrastructure: provision of atmospheric composition data from GAW stations,

Scientific assessments: advancing scientific understanding through analysis of global data sets,

Science-for-Services Initiatives: engage with user communities for supporting services and policies,

Capacity Building and education: provide training opportunities for all GAW users from all regions

GAW: Research Infrastructure

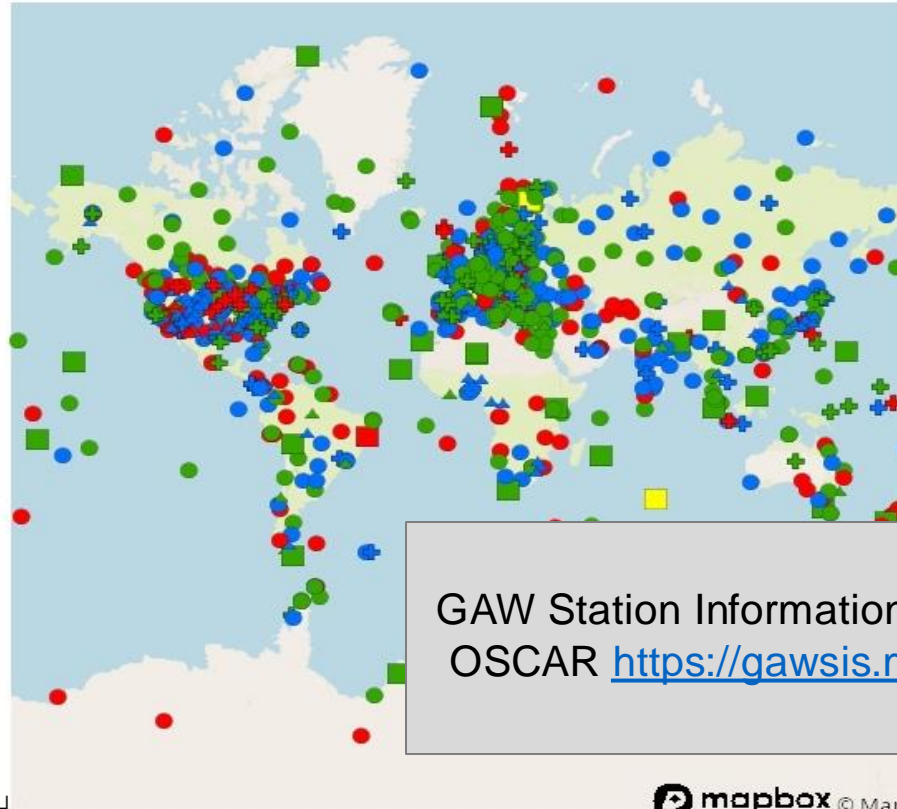

Strengthen the atmospheric composition measurement and data infrastructure and contribute to understanding trends and variability and extremes.

- More than 200 parameters
- Intercomparisons
- Measurement guidelines
- World Data Centers

Open access with emphasis in QA and QC

Global Climate Observing system: GCOS

Essential Climate Variables

GAW Focal Areas

- Aerosols (*chemical and physical properties, AOD*)
- Greenhouse Gases (*CO₂ and its isotopes, CH₄ and its isotopes, N₂O, SF₆, CFCs*)
- Stratospheric Ozone and vertical ozone distribution
- Reactive Gases (*O₃, CO, VOC, NO_x, SO₂*)
- Precipitation Chemistry
- UV Radiation

Note that GAW stations are required to meet GCOS monitoring principles

<https://gcoss.wmo.int/en/essential-climate-variables>

GAW Scientific assessments

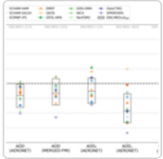

- Publish community assessment reports and high-level scientific papers on the state of the atmosphere and its evolution,
- Provide technical recommendation for monitoring atmospheric composition
- Contribute to international reports

Science for Services

Sand and Dust Storms and its impacts

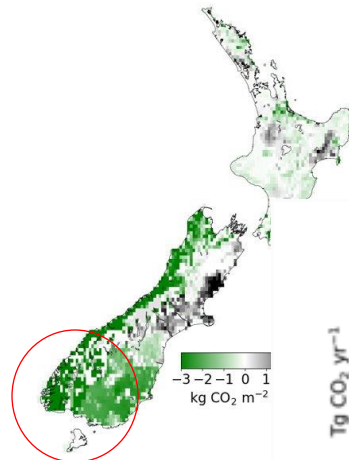

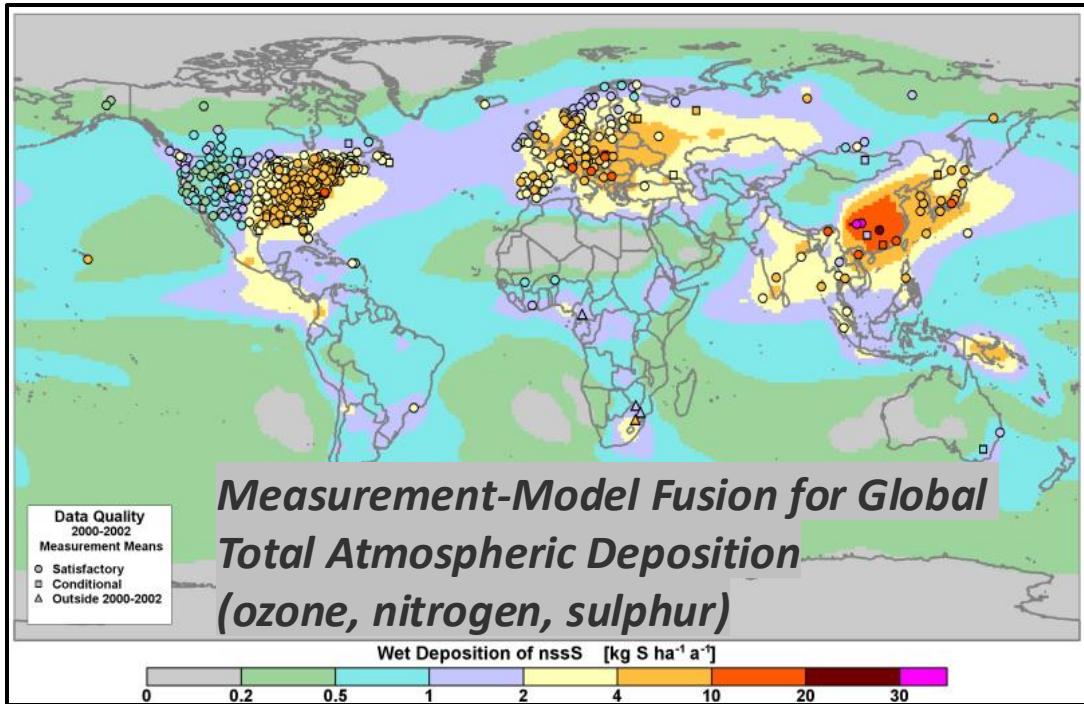

inDust Leaflet available in www.cost-indust.eu/media-room

Science for Services

Advance the application of atmospheric composition information in support of policies and conventions, and expand **societal services** related to air quality, human and ecosystem health, **climate change** and food production.

Deposition to ecosystems and crops + climate action

Integrated Global Greenhouse Gas Information System

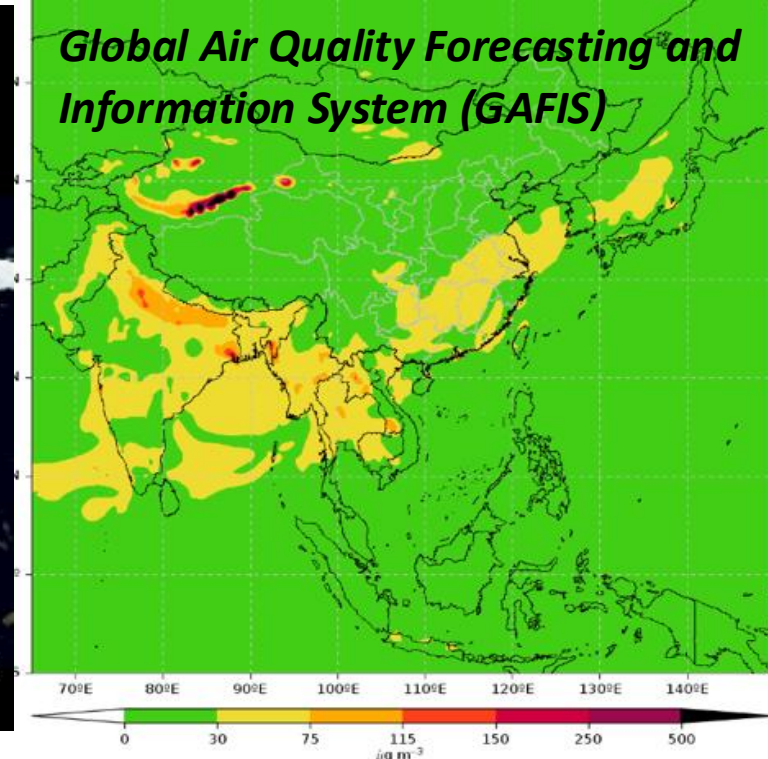

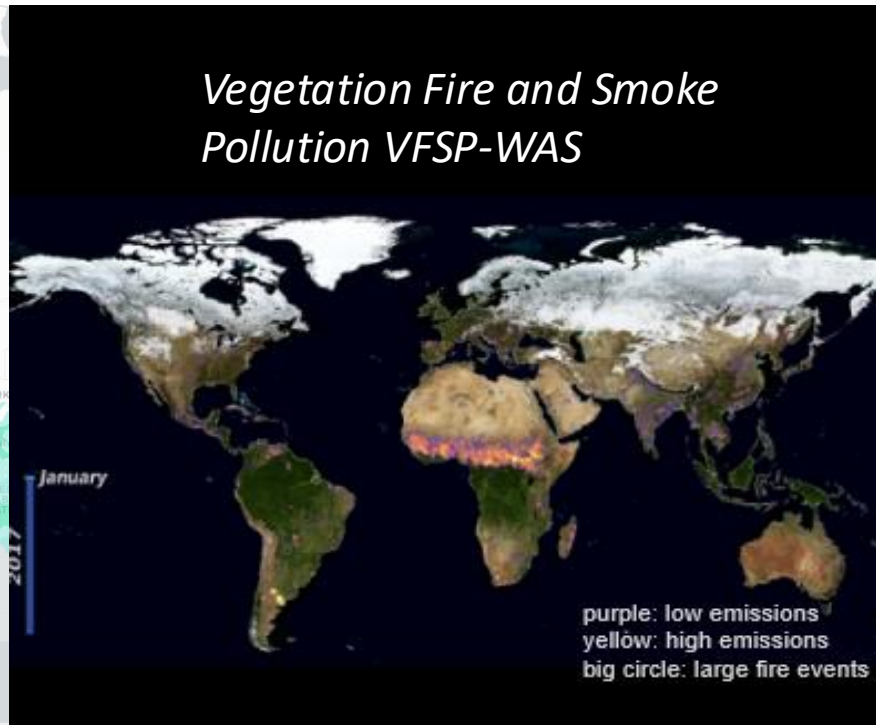

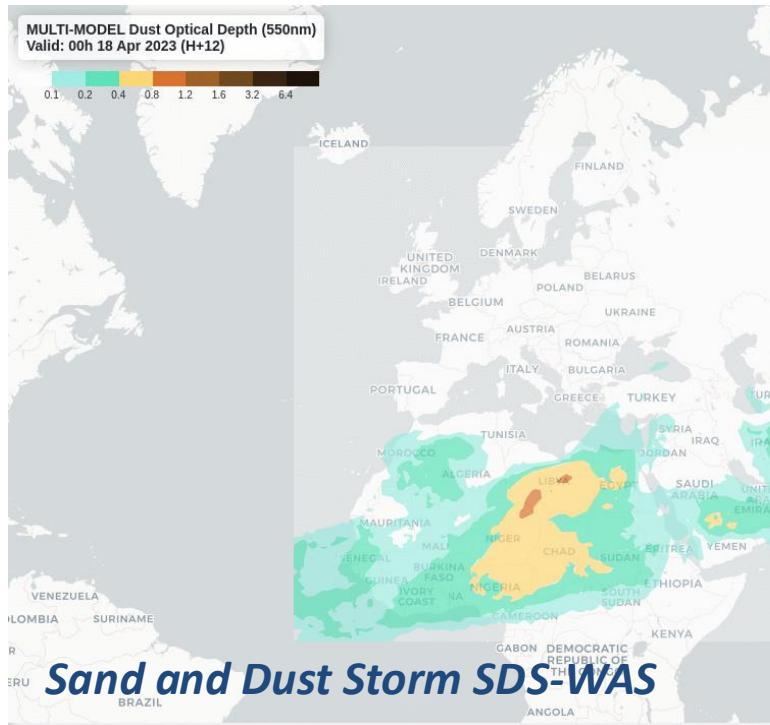

Aotearoa New Zealand's terrestrial carbon uptake

Science for Services

*Advance the application of atmospheric composition information in support of policies and conventions, and expand **societal services** related to air quality, human and ecosystem health, climate change and food production.*

Warnings and Forecasting Services Model intercomparisons

WMO-GAW Warning Advisory and Assessment Systems (SDS-WAS and VFSP-WAS)

The World Meteorological Organization spearheads a Sand and Dust Storm Warning Advisory and Assessment System.

Data from NOAA on Wednesday 7 June 2023

International coordination of research for weather and climate

Identification and assessment of SDS and VFSP impacts

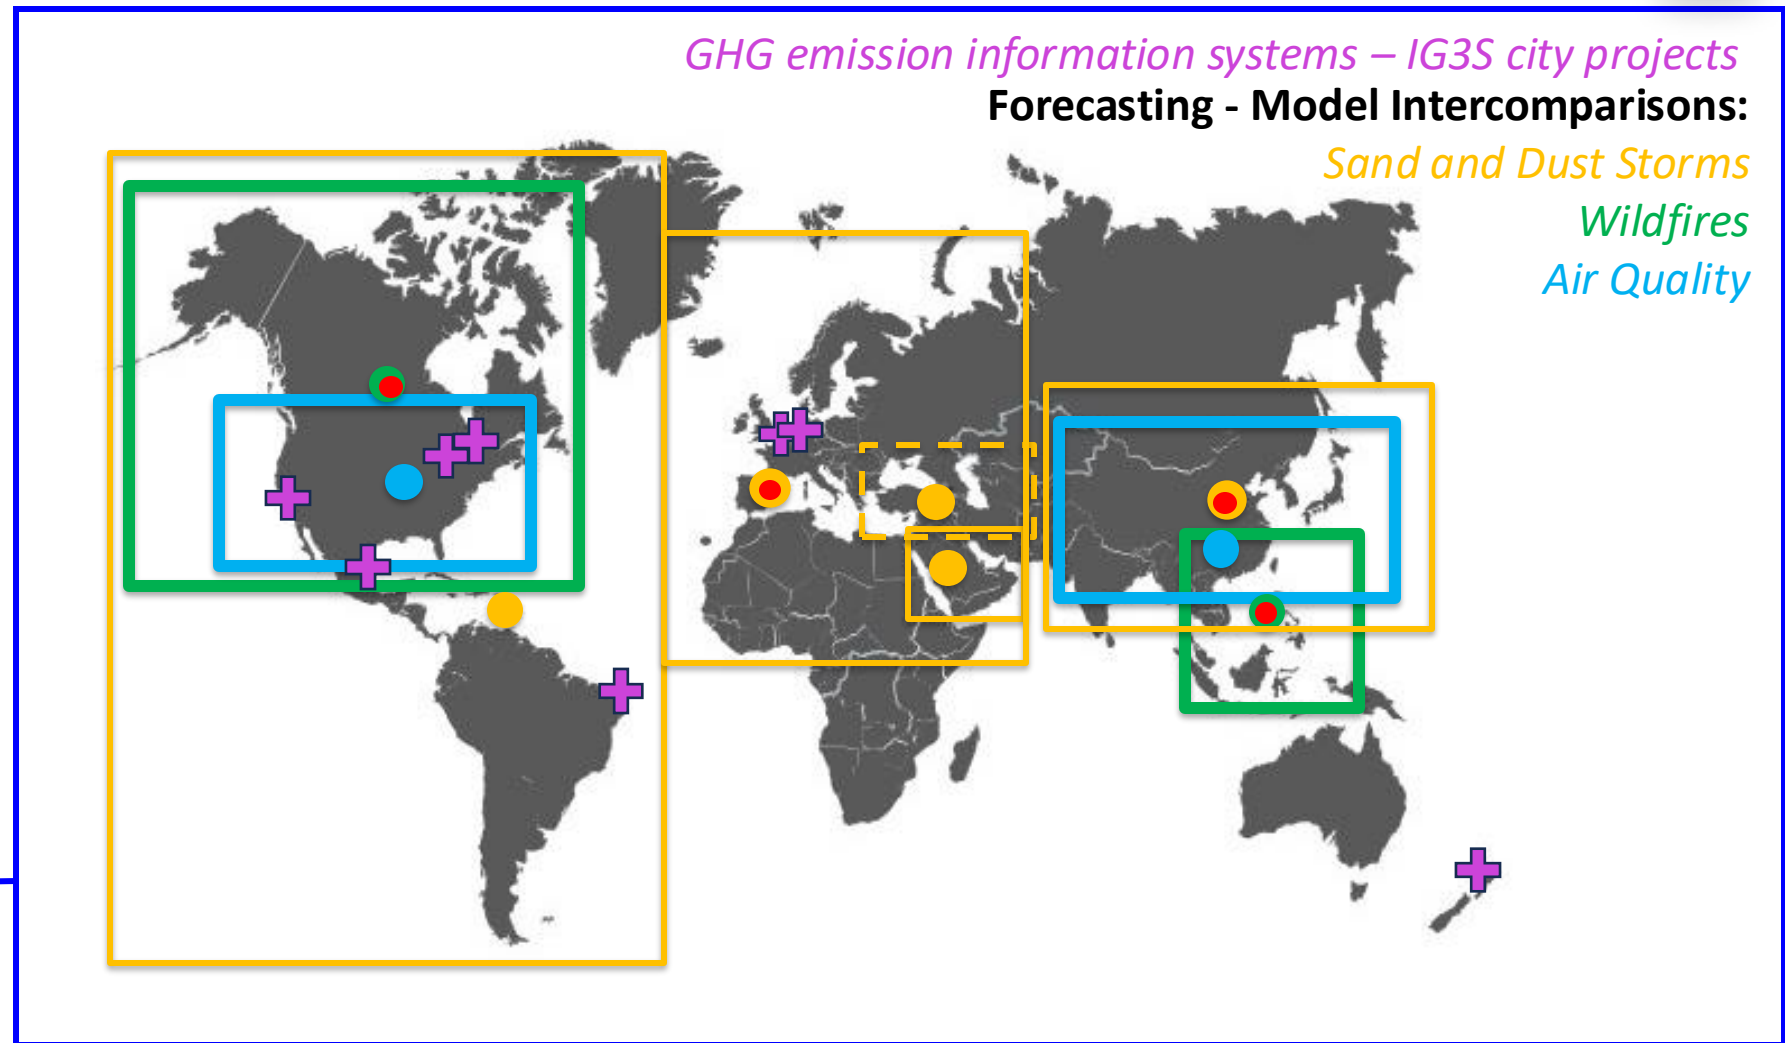

Promoting the use of current available products (observations and monitoring)

Building capacity and facilitate access to the available services

Dissemination and awareness

Infrastructure for the provision of Services

Capacity Development

- Provision of training to GAW station operators through the Global Atmosphere Watch Training & Education Centre (GAWTEC)
- GAW stations instrument intercomparison and calibration campaigns
- Training on data quality control, data use, modelling tools and quality assurance procedures

Promoting latest Science achievements

WMO Bulletins in 2024

The image displays three WMO bulletins from 2024. The first is the 'WMO AIR QUALITY AND CLIMATE BULLETIN' (No. 4 - SEPTEMBER 2024), which discusses the impact of greenhouse gas accumulation on air quality and climate. The second is the 'WMO AIRBORNE DUST BULLETIN' (No. 6 - JULY 2024), providing an overview of global airborne dust in 2023. The third is the 'WMO GREENHOUSE GAS BULLETIN' (No. 20 | 28 October 2024), detailing the state of greenhouse gases in the atmosphere based on Global Observations through 2023. Each bulletin includes a world map and text-based information.

What did it happen in 2023?

Asia suffered several extraordinary events in Spring 2023.

Overview of global air

The global average of air concentrations in 2023 (12.7) was slightly lower than that of 2022 (13.2). The 2023 dust concentration is mainly attributed to several dust-active regions: North Africa, the Arabian Peninsula, northern India, central Asia, and China. But annual mean surface concentrations were higher over western Central Asia, southern Mongolia in 2023. Spatially, the spring surface dust concentration was localized in some areas of Africa. In the southern hemisphere, dust concentrations reached their highest level of central Australia and the wind-driven dust source areas to the west of Australia.

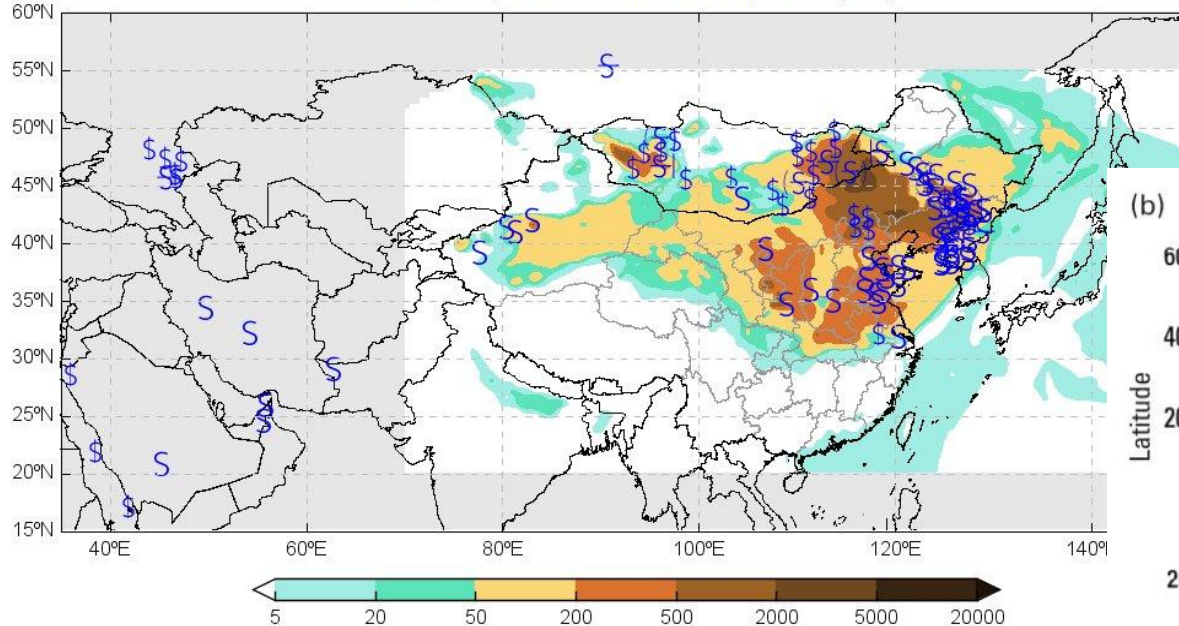

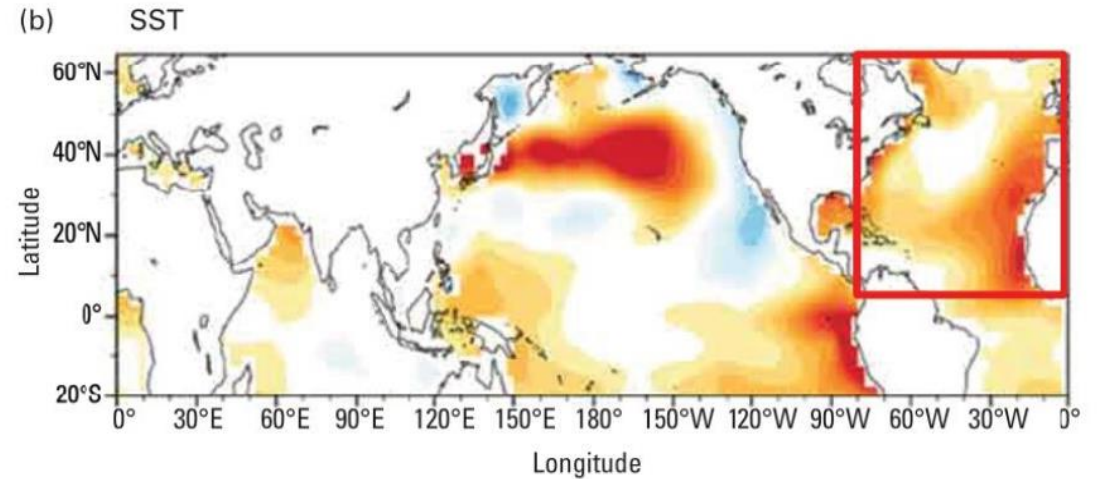

Figure 5. Annual mean surface concentration of dust (2023) relative to the 1981-2010 mean. Source: These results are derived from...

UN Early Warning for All | EW4All

“The facts are clear. Early warnings save lives and deliver vast financial benefits. I urge all governments, financial institutions and civil society to support this effort.” – UN Secretary-General António Guterres

Strategy build in 4 pillars:

1. Disaster risk knowledge and management (UNDRR)
2. Detection, observation, monitoring, analysis, and forecasting (WMO)
3. Warning dissemination and communication (ITU)
4. Preparedness and response capabilities (IFRC)

50% of countries not protected by Early Warnings
In the list of potential hazards are SDS, wildfires and air pollution

WEATHER CLIMATE WATER

GAW – WCRP/ESMO secretariat priorities

- Not to encourage raising entropie
- Streamline initiatives
- Ensure high-level cooperation amongst international actors

**Enhancing coordination,
exchange and collaboration**
